Software engineer building open-source AI developer tooling — **12,000+ npm downloads** across 5 CLI tools; **TypeScript, Python, Go, React**.

Education

Western University <i>Bachelor of Science, Honours Specialization in Computer Science (Co-op)</i> • GPA: 3.8 ; Dean's Honor List (2023–2025); Coursework: Data Structures & Algorithms, Machine Learning, Databases, Operating Systems.	Expected April 2028 London, ON
Y Combinator Startup School <i>Attendee — in-person founder program (as co-founder of Chox)</i>	July 2026 San Francisco, CA

Experience

Product Engineer Intern <i>Dayforce — Strategic Workforce Planning (formerly Agentnoon, YC W22)</i> • 8-month product engineering co-op on the workforce planning and org design product — built by the team formed from Dayforce's 2025 acquisition of Agentnoon (YC W22) — within its enterprise HCM platform (6M+ users).	Sept 2026 – April 2027 Hybrid (Toronto, ON)
Co-Founder <i>Chox — Infrastructure for Autonomous AI Agents</i> • Built a Go HTTP proxy that intercepts AI agent tool calls to external APIs, enforcing rule-based governance policies with argument-aware risk scoring across read, write, delete, and financial actions, surfaced through a React dashboard with audit logs. • Evolved the product into chox-cli, a local-first TypeScript CLI and MCP server that mines Claude Code and Codex session history to detect recurring cross-agent handoffs and run gated context relays between agents; published to npm (500+ downloads).	January 2026 – Present Go, TypeScript, React, PostgreSQL, MCP
President & Founder <i>Western Agentic Development Club, Western University</i> • Founded and lead Western's first student community for agentic AI development, running workshops, hackathons, and networking events on Claude, MCP servers, RAG, and multi-agent orchestration, and directing club-led teams that ship AI agent tools end to end.	March 2026 – Present Claude, MCP, RAG, LangGraph, n8n
Software Engineer Intern <i>ICARO Media Group</i> • Refactored and upgraded LAMP-based web applications, reducing production friction across internal workflows. • Built Flask REST APIs and resolved latency bottlenecks via profiling, improving median API response time by 15% under peak load.	July 2025 – Sept 2025 Thornhill, ON

Projects

Claude Workflow Composer TypeScript, React, Node.js, Claude Code • Built a visual desktop app for composing multi-agent coding workflows — drag-and-drop agent canvas, per-agent skill and model assignment, and repeated-action detection that proposes workflows from real usage history — reaching 5,700+ npm downloads (claude-cwc) and 36 GitHub stars.	May 2026 – Present
context-audit TypeScript, Node.js, npm, CLI Tooling • Built a zero-dependency TypeScript CLI that audits AI coding agents' instruction files across Claude Code, Codex, Cursor, and AGENTS.md, measuring token cost, dead skills, and real usage from transcript history — 1,700+ npm downloads in its first five weeks. • Engineered a 25-check security engine (Unicore normalization, hidden-instruction and exfiltration patterns) validated against a regression corpus of 9 documented real-world attack shapes.	August 2026
rungraph TypeScript, Node.js, MCP, Data Visualization • Built a zero-setup visualizer that reconstructs Claude Code sessions and multi-agent workflow runs from local transcripts into interactive directed graphs with decision lineage, live tailing, and an agent-readable JSON IR + MCP server — 3,300+ npm downloads and 25 GitHub stars in its first month.	August 2026
Open Source Contribution (agency-agents PR #129) Bash, Claude, GitHub • Built a LinkedIn Content Creator agent merged into agency-agents (150,000+ stars; formerly GitHub's #1 trending repo).	March 2026
Lazarus FastAPI, PostgreSQL, Neo4j, Redis, React, WebSockets • Built an autonomous multi-agent AI system that mines failed clinical trials and evaluates drug-repurposing opportunities; placed Top 10 in the Regeneron AI & Tech for Clinical Trials track against 400+ hackers and 100+ teams.	Hack Princeton, April 2026

Technical Skills

Languages: TypeScript, Python, Go, Java, C, JavaScript, SQL, Bash, HTML/CSS
Frameworks & Libraries: React, Next.js, Node.js, FastAPI, Flask, Vite, Tailwind CSS, NumPy, Pandas, PyTorch, TensorFlow, Scikit-learn
Infrastructure & Tools: Docker, Linux, PostgreSQL, Redis, AWS, Supabase, Git, GitHub Actions (CI/CD), Vitest, REST APIs, WebSockets
AI & LLMs: MCP (Model Context Protocol), Claude API, LangGraph, LangChain, Langfuse, CrewAI, AutoGen, RAG, embeddings, prompt engineering, model evaluation, multi-agent systems
AI Coding Agents: Claude Code, OpenAI Codex, Gemini CLI, Hermes Agent, OpenClaw, OpenCode, n8n

Honors and Awards

Academic: Western Admission Scholarship; Dean's Honor List 2023, 2024, 2025
Certification: Machine Learning Specialization — Andrew Ng, Coursera / DeepLearning.AI (December 2025)
